PROJECTS

1. **Smart Car Parking System**
- **Objective :** The main objective of the Project is to overcome the various parking problem. And also replace manual work to the digital work or computerized system or online.
- **Working :** In this user has to use android application where a user can register his own information such as name, contact number, vehicle number, vehicle information etc. Admin will now give the parking allotment for that vehicle on its registration, also generate QR code for the user. Admin uses web portal over internet. Whenever user want to find parking slot, he can search from this application, he can search nearby empty parking slot. After getting empty slot he can park his car simply by scanning QR code at the entrance of the Parking system. From this application user get help to park his easily find park location of park car.
- **Outcome :** we have developed a system in which we can park car using QR code and it can be captured using mobile phones cameras. It can also be used in online shopping sites and can also be used in many more applications in future. So to find out place for the parking will be more easier.
